

**Rocky Flats Environmental Technology Site (RFETS)  
Site-Wide Water Balance (SWWB)  
Work Plan**

**August 15, 2000**

**INSTRUCTIONS FOR USING CD-ROM VERSION**

This CD-ROM contains versions of the Site-Wide Water Balance (SWWB) Work Plan and associated documents that can be accessed using a personal computer (PC) using Adobe® Acrobat® version 3.0 or higher. This software must be loaded on your PC before opening these files. All documents were prepared using Adobe® Acrobat® 4.05.

There are two versions of each document (all \*.pdf) that affect their appearance and how they can be accessed:

- File **WORKPLN1** can be viewed and printed using Adobe® Acrobat® 3.x.
- File **WORKPLN2** can be viewed and/or printed using Adobe® Acrobat® 4.x or higher only. It also contains bookmarks that allow quicker navigation when viewing.
- Files **APPENDX1** and **APPENDX2** are the corresponding files for Appendix A-2 of the Work Plan. These files were prepared separately to minimize changes to the original formatting of the AME DQO document.
- Files **APPENDX3** and **APPENDX4** are the corresponding files for Appendix C of the Work Plan. These files were prepared separately to minimize changes to the original formatting of this.

The original Microsoft® Word 2000 file was formatted for printing using an EPSON 3000 color inkjet printer using 8-½ x 11" and 11" x 17" paper in portrait and landscape formats. Printing using another printer or on different sized paper may cause changes in pagination or other aspects of the document's appearance.
