UBC	Under Building Contamination
VOC	volatile organic compound
WRW	wildlife refuge worker

## **1.0 INTRODUCTION**

This Industrial Area (IA) Sampling and Analysis Plan (SAP) (IASAP) (DOE 2001) Addendum #IA-04-10 includes Individual Hazardous Substance Site (IHSS) Group-specific information, sampling locations, and potential contaminants of concern (PCOCs) for IHSSs, Potential Areas of Concern (PACs), and Under Building Contamination (UBC) Sites proposed for characterization during Fiscal Year (FY) 04. This IASAP Addendum is a supplement to the IASAP (DOE 2001) and includes data and proposed sampling locations for IHSS Group 700-11. IHSS Group 700-11 consists of Bowman's Pond (PAC 700-1108) and the Steam Condensate Tanks (IHSS 139.1[N][a]). The location of IHSS Group 700-11 is shown on Figure 1.

## **2.0 EXISTING CHARACTERIZATION INFORMATION**

Bowman's Pond (PAC 700-1108) consists of a manmade depression approximately 3 to 4 feet deep with an areal extent of approximately 28 by 33 feet. The pond was constructed to contain stormwater from building foundation drains and storm drains in the 700s Area. The Steam Condensate Tanks (IHSS 139.1[N][a]) have been removed and the concrete slab that supported the former tanks remains in place. Surface water drainage in the area generally flows from the southwest to the northeast.

Existing concentrations and activities in sediment and soil greater than the method detection limits (MDLs)/reporting limits (RLs) or background means plus two standard deviations are presented on Figures 2 and 3, respectively. Existing information and data for this IHSS Group are available in Appendix C of the IASAP (DOE 2001), the Historical Release Reports (HRRs) (DOE 1992, 1999a), the Closeout Report for the Site Characterization of Bowmans Pond (PAC 700-1108) and Steam Condensate Holding Tanks (IHSS 139.1N) (DOE 1999b), and the Assessment of Known, Suspect, and Potential Environmental Releases of Polychlorinated Biphenyls (PCBs) (DOE 1991). Table 1 presents the PCOCs and proposed sampling methodologies.

**Table 1**  
**IHSS Group 700-11 PCOCs**

IHSS Group	IHSS/PAC/UBC Site	PCOCs	Media	Data Source	Sampling Method
700-11	PAC 700-1108 – Bowman's Pond  IHSS 139.1(N)(a) -Steam Condensate Holding Tanks  (Note - IHSS 139.1(N)(b) - Hydroxide Tank addressed in IHSS Group 700-4 Closeout Report)	Metals PCBs Radionuclides SVOCs VOCs	Surface and subsurface soil	HRRs (DOE 1992, 1999a), IASAP (DOE 2001), Closeout Report for the Site Characterization of Bowmans Pond and Steam Condensate Holding Tanks (DOE 1999b), and Process knowledge	Statistical grid Biased sampling

Previous data for IHSS Group 700-11 indicate detections of PCBs and semivolatile organic compounds (SVOCs) greater than Rocky Flats Cleanup Agreement (RFCA) wildlife refuge worker (WRW) action levels (ALs) (DOE et al. 2003). All of the PCOCs listed in Table 1 were reported above MDLs/RLs or corresponding background means plus two standard deviations in sediment and soil (Figure 2).

### **3.0 SAMPLING**

The IHSS Group 700-11 sampling summary is presented in Table 2.

**Table 2**  
**IHSS Group 700-11 Sampling Summary**

<b>Category</b>	<b>Total</b>
Number of Sampling Locations	25
Number of Samples	50
Number of Metal Analyses	28
Number of PCB Analyses	54
Number of Radionuclide Analyses	28
Number of SVOC Analyses	28
Number of VOC Analyses	14

All proposed sampling locations are located either within PAC 700-1108 or nearby surrounding areas. No characterization sampling locations are proposed in IHSS 139.1(N)(a). Four confirmation samples will be collected from this area after the concrete slab that supported the former steam condensate tanks is removed. The confirmation samples will include two samples from under the former tanks and two samples at the northern edge of the former concrete slab.

The proposed sampling specifications (number and type of samples) for IHSS Group 700-11 are listed in Table 3 and shown on Figure 4. A 36-foot statistical grid and biased sampling locations were applied at IHSS Group 700-11. Biased sampling locations were selected near outfalls of storm and foundation drains, and in the drainage area downgradient of Bowman's Pond. Additionally, 10 biased sampling locations for PCBs analyses only were selected in three areas formerly used for outside storage south, southwest, and west of IHSS Group 700-11. These select areas exist between the 700s-Area IHSS/PAC/UBC boundaries and have been included as part of the IHSS Group 700-11 characterization to target potential PCB sources.

As part of IHSS Group 700-5 SAP Addendum #IA-03-17 (DOE 2003), three locations were identified (CG49-012, CG49-015 and CG49-016) for sampling along the drainage into Bowman's Pond and will not be duplicated in this SAP Addendum. These sampling locations are shown on Figure 4. One of the samples, CG49-016, will be analyzed for dioxins in addition to metals, PCBs, radionuclides, SVOCs, and volatile organic compounds (VOCs) because the sampling location coincides with the previous maximum PCB detection reported in the area. Analytical results of the three sampling locations will be included with the Data Summary or Closeout Report for both IHSS Groups 700-11 and 700-5.

Proposed new sampling locations are the starting point for IHSS Group characterization. After characterization starts, the number and type of samples may change based on sample results. Changes to sampling specifications will be considered in consultation with the regulatory agencies. If contaminant concentrations are found to be above ALs near the grid boundary, additional samples will be collected in consultation with the regulatory agencies and a contact record will be issued. Biased sampling locations will be field-checked and the locations adjusted, if necessary, through the consultative process.
