DUE DATE
ACTION

Mr. Steve Gunderson
Rocky Flats Cleanup Agreement Project Coordinator
Colorado Department of Public Health and Environment
4300 Cherry Creek Drive South
Denver, CO 80246-1530

Mr. Tim Rehder
Rocky Flats Cleanup Agreement Team Leader
United States Environmental Protection Agency
999 18th Street, Suite 500
Denver, CO 80202-2466

Dear Mr. Gunderson and Mr. Rehder:

Enclosed for your review is the 2003 Rocky Flats Cleanup Agreement (RFCA) Annual Review (Annual Review) performed in accordance with RFCA paragraph 5 for July 1, 2002, through June 30, 2003. Included in this Review is the summary of the annual review for RFCA Appendix 3, Implementation Guidance Document and resulting updates, which are submitted for approval in accordance with RFCA paragraph 119.

Finally, the Review includes proposed Practical Quantitation Limits (PQLs) for RFCA Attachment 5, Table 1. We propose to modify Table 1 with these PQLs after public review and comment in accordance with RFCA paragraph 117.

The 2002 RFCA Annual Review, which was transmitted to you for your review on June 27, 2003, incorrectly identified the period for which the review was conducted as calendar year 2002. The 2002 RFCA Annual Review actually covered the period July 1, 2001, through June 30, 2002, which is consistent with the review period for previous annual reviews. A revised 2002 RFCA Annual Review, which supercedes in its entirety the Review transmitted on June 27, 2003, is also enclosed for your review.

If you have any questions or comments about these enclosures, please contact Rich Schassburger at (303) 966-4888.

Sincerely,

Joseph A. Legare, Assistant Manager
for Environment and Stewardship

2002 ROCKY FLATS CLEANUP AGREEMENT ANNUAL REVIEW

1.0 BACKGROUND

The Rocky Flats Cleanup Agreement (RFCA or Agreement) was signed by the Department of Energy (DOE), the Environmental Protection Agency (EPA) and the Colorado Department of Public Health and Environment (CDPHE) on July 19, 1996. (DOE, EPA, and CDPHE are collectively referred to as the "RFCA Parties.") The RFCA Parties have committed to review the Agreement to determine if any revisions are necessary. RFCA paragraph 5 states in part:

The Parties shall conduct an annual review of all applicable new and revised statutes and regulations and written policy and guidance to determine if an amendment pursuant to Part 19 (Amendment of Agreement) is necessary.

In addition to the annual review prescribed in RFCA paragraph 5, the agencies committed to conducting an internal annual review of the radionuclide soil action levels (RSALs). Questions to be addressed on an annual basis include:

1. Is there new scientific information available that would impact the interim action levels?
2. Has a national soil action level been promulgated within the year? If yes, the parties commit to revisit the Rocky Flats interim action levels.
3. How were the interim action levels applied to the site over the course of the year?
4. Have the remedies been effective?

(See, Responsiveness Summary for Soil Action Levels released on November 6, 1996.)

This report is a summary of the Parties' 2002 regulatory/radionuclide soil action levels annual review for the period July 1, 2001 through June 30, 2002.

1.1 What the Parties reviewed this year

The following environmental laws and associated regulations, written policy and guidance were reviewed:

Comprehensive Environmental Response, Compensation, and Liability Act;
Resource Conservation and Recovery Act/Colorado Hazardous Waste Act;
Toxic Substances Control Act;
Clean Water Act, Colorado Water Quality Control Act, Safe Drinking Water Act;
National Environmental Policy Act;
Endangered Species Act;
Radiation Related Document Review; and
Defense Authorization Acts and Appropriation Acts.

In addition to the above environmental laws and the radionuclide soil action levels, the Preliminary Remediation Goals (PRGs), RFCA Attachment 5, Action Levels and Standards Framework for Surface Water, Ground Water and Soils, and RFCA Appendix 3, Implementation Guidance Document (IGD) were reviewed. Summaries of these reviews are described below.

1.2 Other reviews

Pursuant to RFCA paragraph 281, DOE developed, in consultation with CDPHE and EPA, a revised Community Relations Plan entitled "Rocky Flats Site-wide Integrated Public Involvement Plan" (Plan). The Plan was completed in March 1998 and is available in the Rocky Flats Public Reading Rooms. RFCA requires an annual review of this document. The RFCA Parties updated the Plan in 2002. The updated Plan will be subject to a 30-day public review and comment period at the end of 2002. A final updated Plan is scheduled for completion in mid-2003.

The Integrated Monitoring Plan was updated in 2002 and is being reviewed for FY03. An Integrated Monitoring Plan Working Group was formed including members from DOE and its contractors, EPA, CDPHE, and stakeholders.

DOE reviews and updates, as required: the Environmental Restoration Ranking (RFCA paragraph 79); the Administrative Record (RFCA paragraph 284); the summary level baseline (RFCA paragraph 141); and the Historical Release Report (RFCA paragraph 119(1)) on an annual basis. These reviews were completed in September 2002.

The Integrated Water Management Plan is also reviewed annually; the Rocky Flats Water Working Group will conduct the next review of the Integrated Water Management Plan.

For more information on any of the above documents, contact either a RFCA Project Coordinator or an Agency community relations representative.

2.0 ENVIRONMENTAL STATUTES

The laws, regulations, policy and guidance documents issued during this review period that may be relevant to activities conducted pursuant to RFCA are discussed below. When an amendment to RFCA or change to any RFCA Attachment or Appendix is recommended, the necessary amendment or other change is also described. Otherwise, no amendment or other changes are recommended.

2.1 Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) was not reauthorized or amended in 2002. EPA has not amended or promulgated new regulations on the National Oil and Hazardous Substances Pollution Contingency Plan; however, EPA has issued several new polices and guidance documents that may be used at Superfund sites.

1. *Risk Assessment Guidance for Superfund: Volume I Human Health Evaluation Manual (Part D, Standardized Planning, Reporting, and Review of Superfund Risk Assessments)*, December 2001. Part D provides guidance on risk assessment planning, reporting, and review throughout the CERCLA remedial process. Part D strives for effective and efficient implementation of Superfund risk assessment practice described in Parts A, B, C, and E, supplemental Office of Solid Waste and Emergency Response (OSWER) directives and other Agency risk assessment guidance. OSWER Directive 9285.7-47. (URL: www.epa.gov/superfund/programs/risk/ragsd/index.htm)
2. *Principles for Managing Contaminated Sediment Risks at Hazardous Waste Sites*, February 12, 2002. The purpose of this guidance is to help EPA site managers make scientifically

sound and nationally consistent risk management decisions at contaminated sediment sites. It presents 11 risk management principles that should be considered when planning and conducting site investigations, and selecting and implementing a response. OSWER Directive 9285.6-08.

3. *Risk Assessment Guidance for Superfund: Volume III Part A: Process for Conducting Probabilistic Risk Assessment*, April 18, 2002. This guidance document was created to establish national criteria to conduct and review Superfund probabilistic risk assessments. OSWER Directive 9285.7-45. (UTL: www.epa.gov/superfund/RAGS3A/index.htm.)
4. *Role of Background in the CERCLA Cleanup Program*, May 1, 2002. This policy statement clarifies EPA's preferred approach for the consideration of background constituents concentrations of hazardous substances, pollutants, and contaminants in certain steps of the remedy selection process, such as risk assessment and risk management, at CERCLA sites. OSWER Directive 9285.6-07P.

2.2 Resource Conservation and Recovery Act/Colorado Hazardous Waste Act

EPA issued a final rule in the Federal Register on October 3, 2001 at 66 FR 50332 entitled, "Correction to the Hazardous Waste Identification Rule: Revisions to the Mixture and Derived-from Rules; Direct Final Rule." The effective date of this rule was February 1, 2002. Because the rule is less stringent than current Colorado Hazardous Waste Act requirements, the State of Colorado must adopt the regulation prior to the regulation being implemented at RFETS. RFETS is monitoring the State of Colorado regulatory activities related to this rule.

On January 22, 2002 at 67 FR 2961, EPA promulgated six amendments to the 1993 Corrective Action Management Unit (CAMU) regulations:

1. Established a specific definition, distinct from the definition of remediation waste, to govern the types of wastes that are eligible for placement in CAMUs.
2. Established more detailed minimum design and operating standards for CAMUs in which waste will remain after closure, with opportunities for Regional Administrators to approve alternate design standards under certain circumstances.
3. Established treatment requirements for wastes that are placed in CAMUs, including minimum treatment standards, with opportunities to adjust treatment requirements under certain circumstances.
4. Established more specific information requirements for CAMU applications and is explicitly requiring that the public be given notice and a reasonable opportunity for public comments before final CAMU determinations are made.
5. Established new requirements for CAMUs that will be used only for treatment and storage.
6. "Grandfathered" certain types of existing CAMUs and allows them to continue to operate under the 1993 rule.

The regulation was effective on April 22, 2002. This regulation is more stringent than the Colorado Hazardous Waste Act provisions and will be applicable if CAMUs are used during RFETS actions.

EPA and CDPHE have issued several new polices and guidance documents that may be used at Superfund sites that may be relevant to RFETS:

1. TANKS Version 4.09b, posted September 27, 2001. TANKS is a Windows-based computer software program that estimates volatile organic compound and hazardous air pollutant emissions from fixed- and floating-roof storage tanks. This program is used, when necessary, for emission calculations. (<http://www.epa.gov/ttn/chief/software/tanks/index.html>.)
2. Universal Waste Rule Compliance Bulletin, September 2001. (<http://www.cdphe.state.co.us/hm/hmwhatsnew.asp>.)
3. Guidance on Demonstrating Compliance With the Land Disposal Restrictions (LDR) Alternative Soil Treatment Standards, July 2002. The purpose of this guidance is to provide suggestions and perspectives on how to demonstrate compliance with the alternative treatment standards for certain contaminated soils that will be land disposed and, therefore, will be subject to the RCRA LDR regulations. OSWER Directive 530-R-02-003.

2.3 Toxic Substances Control Act

Within the review period, DOE and EPA clarified implementation of EPA's Polychlorinated Biphenyls (PCBs) bulk product waste rule (40 CFR 761.62) at RFETS. Pursuant to a letter from Kerrigan Clough to Joe Legare, Approval of Risk-Based Approach for PCB-Based Painted Concrete, November 2001, concrete painted with PCB-based paints may be left in place in the basements of demolished buildings, and concrete rubble containing PCB-based paints may be stored onsite and used as backfill. This clarification will be added to the comment for 40 CFR 761.62 in the Master List of Potential Applicable or Relevant and Appropriate Requirements (ARARs) contained in RFCA Appendix 3 IGD, Appendix K, Master List of Potential ARARs.

2.4 Clean Water Act, Colorado Water Quality Control Act, and Safe Drinking Water Act

2.4.1 Clean Water Act

There were numerous federal actions taken under authority of the Clean Water Act in the period July 1, 2001 through June 30, 2002, some of which impact RFETS, either immediately or in the long term.

Water Quality Standards

In May 2002, EPA issued a Draft Strategy for Water Quality Standards and Criteria to lay out the long range planning for development of water quality standards. In June 2002, the agency issued draft guidance on water quality criteria for bacteria, *Implementation Guidance for Ambient Water Quality Criteria for Bacteria*. Both documents were intended to initiate public discussion leading to final development of a long-range strategy for standards and criteria and for the development of criteria for bacteria. While there is no immediate impact to RFETS, long-range planning and criteria development may lead to eventual applications to the Site. RFETS will continue to monitor regulatory activities associated with water quality standards.

Permit for the Management of Biosolids

EPA Region VIII promulgated a general permit for biosolids management at federal facilities in the State of Colorado. The permit was published in June 2002 for final comment. The permit covers facilities that generate biosolids from wastewater treatment and allows management by land application, disposal at a sanitary landfill or surface disposal. The general permit is applicable to the Site.

2.4.2 Colorado Water Quality Control Act

Section 309

In the 2002 legislative session, Colorado adopted a new section to the Water Quality Control Act, Section 309. In addition to authorizing changes in the permit fee structure, Section 309 also required the health department to initiate a thorough review of water quality standards and use classifications for all Colorado waters, with a special charge to consider the “unique” characteristics of the state’s water. The health department has convened a work group to help guide it through this complex task. A final report from the Water Quality Control Division is due to the legislature in December 2003. Site personnel have participated in the work group to monitor progress. Water quality information collected at RFETS may be valuable in clarifying the discussion of the “unique” characteristics of state waters, especially for intermittent streams and effluent-dominated streams with periodic flow.

Commission Actions

The Colorado Water Quality Control Commission did not take any formal action during this review period that would result in any changes to RFCA.

2.4.3 Safe Drinking Water Act

No new or revised Maximum Contaminant Levels were adopted since the last update or any other changes to the Safe Drinking Water Act that would apply to RFCA activities.

2.5 Clean Air Act

EPA and the State of Colorado continued to promulgate regulations under the existing Act, but the majority is not applicable to RFCA activities. Where new regulations were applicable there were no new compliance requirements. The RFCA Parties will continue to monitor regulatory activity associated with this effort.

2.6 National Environmental Policy Act

No new or revised National Environmental Policy Act requirements impacting RFCA activities were proposed or promulgated during this review period. No separate National Environmental Policy Act reviews have been required or performed under RFCA pursuant to RFCA paragraph 95.

2.7 Endangered Species Act

No new or revised Endangered Species Act requirements impacting RFCA activities were proposed or promulgated during this review period.

2.8 Radiation Related Document Review

See, Section 3.0 Radionuclide Soil Action Levels, below.

2.9 Environmental Statute Summary

Based on the review of the environmental statutes and associated regulations, written policy, and guidance, no amendment to RFCA is required at this time. However, the comment concerning Section 2.3, TSCA, PCBs, 40 CFR 761.62, will be added to the RFETS Master List of Potential ARARs (RFCA Appendix 3 IGD Appendix K).

3.0 RADIONUCLIDE SOIL ACTION LEVELS

The RFCA Parties continued their review of the RSALs during the review period. The RFCA Parties worked to complete their review and document the results by September 30, 2002.

In addition to the annual review requirements prescribed in RFCA paragraph 5, the RFCA Parties also addressed the four questions discussed in the introduction. The RSAL working group reviewed questions 1 and 2 as part of its review. Findings will be discussed in a document currently in preparation, titled, *Results of the Interagency Review of Radionuclide Soil Action Levels*. Regarding question 3, interim RSALs were applied as data quality objectives for a number of accelerated actions taken at the site over the course of the review period. Finally, regarding question 4, the first CERCLA 5 Year Review for the Site has been conducted during this review period and a Draft Report was issued for a 45 day public review and comment period, which ended June 12, 2002. The Draft Report concludes that the remedies implemented for OU-1 and OU-3 are protective. The Draft Report also concludes that ongoing custody and control of the Site by DOE, monitoring programs and restrictions of public access to the Site serve to adequately control risks posed by contamination, including radionuclides, at this time. After consideration of public comments the Report will be finalized and submitted to for EPA concurrence with a final protectiveness determination.

4.0 RFCA ATTACHMENT 5: ACTION LEVELS AND STANDARDS FRAMEWORK FOR SURFACE WATER, GROUND WATER AND SOILS

The RFCA Parties have identified tentative changes to action levels that impact RFCA Attachment 5. Proposed modifications to Attachment 5 will be made available for public comment in accordance with RFCA paragraph 117.

5.0 IMPLEMENTATION GUIDANCE DOCUMENT

RFCA Appendix 3, IGD was reviewed by the RFCA Parties to determine if an update was necessary. The IGD, Appendix K, Master List of Potential ARARs was updated as described in Section 2.9, above.

2003 ROCKY FLATS CLEANUP AGREEMENT ANNUAL REVIEW

1.0 BACKGROUND

The Rocky Flats Cleanup Agreement (RFCA or Agreement) was signed by the Department of Energy (DOE), the Environmental Protection Agency (EPA) and the Colorado Department of Public Health and Environment (CDPHE) on July 19, 1996. (DOE, EPA, and CDPHE are collectively referred to as the "RFCA Parties.") The RFCA Parties have committed to review the Agreement to determine if any revisions are necessary. RFCA paragraph 5 states in part:

The Parties shall conduct an annual review of all applicable new and revised statutes and regulations and written policy and guidance to determine if an amendment pursuant to Part 19 (Amendment of Agreement) is necessary.

In addition to the annual review prescribed in RFCA paragraph 5, the agencies committed to conducting an internal annual review of the radionuclide soil action levels (RSALs). Questions to be addressed on an annual basis include:

Is there new scientific information available that would impact the interim action levels?
Has a national soil action level been promulgated within the year? If yes, the parties commit to revisit the Rocky Flats interim action levels.
How were the interim action levels applied to the site over the course of the year?
Have the remedies been effective?

(See, Responsiveness Summary for Soil Action Levels released on November 6, 1996.)

This report is a summary of the Parties' 2003 regulatory/radionuclide soil action levels annual review for the period July 1, 2002 through June 30, 2003.

1.1 What the Parties reviewed this year

The following environmental laws and associated regulations, written policy and guidance were reviewed:

Comprehensive Environmental Response, Compensation, and Liability Act;
Resource Conservation and Recovery Act/Colorado Hazardous Waste Act;
Toxic Substances Control Act;
Clean Water Act, Colorado Water Quality Control Act, Safe Drinking Water Act;

National Environmental Policy Act;
Endangered Species Act;
Radiation Related Document Review; and
Defense Authorization Acts and Appropriation Acts.

In addition to the above environmental laws and the radionuclide soil action levels, RFCA Attachment 5, *Action Levels and Standards Framework for Surface Water, Ground Water and Soils*, and RFCA Appendix 3, *Implementation Guidance Document (IGD)* were reviewed. Summaries of these reviews are described below.

1.2 Other reviews

Pursuant to RFCA paragraph 281, DOE developed, in consultation with CDPHE and EPA, a revised Community Relations Plan entitled "Rocky Flats Site-wide Integrated Public Involvement Plan" (Plan). The Plan was completed in March 1998 and is available in the Rocky Flats Public Reading Rooms. RFCA requires an annual review of this document. The RFCA Parties decided to update the Plan in 2002. A Draft update of the Plan was available for a 30-day public review and comment period that closed on November 25, 2002. Based upon consideration of comments DOE revised the Draft update for approval by CDPHE and EPA.

The Integrated Monitoring Plan is being reviewed for 2004 implementation. An Integrated Monitoring Plan Working Group was formed including members from DOE and its contractors, EPA, CDPHE, and stakeholders. The final 2004 Integrated Monitoring Plan is scheduled for completion in mid-2003.

DOE reviews and updates, as required: the Environmental Restoration Ranking (RFCA paragraph 79); the Administrative Record (RFCA paragraph 284); the summary level baseline (RFCA paragraph 141); and the Historical Release Report (RFCA paragraph 119(i)) on an annual basis. These reviews were completed in September 2002, with the next review scheduled for September 2003.

The Integrated Water Management Plan is also reviewed annually; the Rocky Flats Water Working Group will conduct the next review of the Integrated Water Management Plan.

For more information on any of the above documents, contact either a RFCA Project Coordinator or an Agency community relations representative.

2.0 ENVIRONMENTAL STATUTES

The laws, regulations, policy and guidance documents issued during this review period that may be relevant to activities conducted pursuant to RFCA are discussed below. When an amendment to RFCA or change to any RFCA Attachment or Appendix is recommended, the necessary amendment or other change is also described. Otherwise, no amendment or other change are recommended.

2.1 Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) was not reauthorized or amended in 2003. EPA has not amended or promulgated new regulations on the National Oil and Hazardous Substances Pollution Contingency Plan. EPA has issued several new policy and guidance documents that may be used at Superfund sites.

1. *Guidance for Comparing Background and Chemical Concentrations in Soil for CERCLA Sites*, September 2002. This document provides assistance to CERCLA remedial project managers and human health and ecological risk assessors during the remedial investigation process to evaluate background concentrations at CERCLA sites. In addition, this document contains recommended statistical methods for characterizing background concentrations of chemicals in soil. Office of Solid Waste and Emergency Response (OSWER) Directive 9285.7-41. (URL: www.epa.gov/superfund/programs/risk/background.pdf.)
2. *Calculation and Use of First-Order Rate Constants for Monitored Natural Attenuation Studies*, November 2002. This paper was published by the U.S. EPA National Risk Management Research Laboratory. It explains when and how to apply first-order attenuation rate constant calculations in monitored natural attenuation studies. First-order attenuation rate constant calculations can be an important tool for evaluating natural attenuation processes at ground-water contamination sites. Specific applications identified in U.S. EPA guidelines (U.S. EPA, 1999) include use in characterization of plume trends (shrinking, expanding, or showing relatively little change), as well as estimation of the time required for achieving remediation goals. EPA 600-S-02-500. (URL: <http://www.epa.gov/ada/download/issue/540S02500.pdf>.)
3. *Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway From Groundwater and Soils (Subsurface Vapor Intrusion Guidance)*, November 29, 2002 (67 Federal Register (FR) 71169). EPA issued a draft guidance that provides current technical and policy recommendations on determining if the vapor intrusion pathway poses an unacceptable risk to human health at cleanup sites. Vapor intrusion is a rapidly developing field of science and policy. This draft guidance is intended to aid in evaluating the potential for human exposure from this pathway given the state-of-the-science at this time. EPA will

continue to explore this area in efforts to improve the state-of-the-science of this complex exposure pathway. This OSWER guidance supercedes the Resource Conservation and Recovery Act (RCRA) guidance issued in December 2001. (Federal Register Notice - November 29, 2002.)

4. *Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites*, December 2002. This document updates a 1992 guidance originally developed to supplement EPA's Risk Assessment Guidance for Superfund, Volume 1-Human Health Evaluation Manual, which describes a general approach for estimating exposure of individuals to chemicals of potential concern at hazardous waste sites. Specifically, this 2002 guidance addresses the exposure point concentration, which is a conservative estimate of the average chemical concentration in an environmental medium determined for each individual exposure unit within a site. OSWER Directive: 9285.6-10 (URL: www.epa.gov/superfund/programs/risk/toolthh.htm.)
5. *Transfer of Long-Term Response Action (LTRA) Project to States*, April 2003. This fact sheet identifies key elements of the LTRA transfer process and provides guidance to remedial project managers related to the transfer of responsibilities from EPA to the state for operation and maintenance of the remedy. This fact sheet is a follow up to the fact sheet entitled *Operation and Maintenance in the Superfund Program*, May 2001, EPA540-F-01-004, and provides more detailed guidance for this component of post-construction completion activities. OSWER Directive: 9355.0-81FS. (URL: www.epa.gov/superfund/action/postconstruction/ltrafactsheet.pdf.)
6. *Five-Year Review Process in the Superfund Program*, April 2003. This fact sheet summarizes the guidance document entitled *Comprehensive Five-Year Review Guidance*, EPA540-R-01-007, which was published in June 2001. The fact sheet includes information on when a five-year review is conducted, who is responsible for conducting a five-year review, and a discussion of the components of a five-year review. OSWER Directive: 9355.7-08FS (URL: www.epa.gov/superfund/action/postconstruction/fiveyearreviewfactsheet.pdf.)
7. EPA issued a notice of availability of a final report, *Framework for Cumulative Risk Assessment*, April 2002. (Published May 27, 2003 at 68 FR 28825.) This report is the first step in a long-term EPA effort to develop Agency-wide cumulative risk assessment guidance.

2.2 Resource Conservation and Recovery Act/Colorado Hazardous Waste Act

EPA issued a final rule on October 7, 2002 at 67 FR 62618 granting a National Treatment Variance for radioactively contaminated cadmium, mercury, and silver contaminated batteries. The rule creates new Land Disposal Restriction subcategories for these wastes. The treatment standard for the wastes in the new subcategory is macroencapsulation in accordance with hazardous debris provisions. The effective date of this rule was November 21, 2002. Because the rule is less stringent than current Colorado Hazardous Waste Act requirements, the State of Colorado must adopt the regulation prior to the regulation being implemented at RFETS. The Site is monitoring the State of Colorado regulatory activities related to this rule.

EPA issued the *Final Guidance on Completion of Corrective Action Activities at RCRA Facilities* on February 13, 2003 (Published on February 25, 2003 at 68 FR 8757). The memorandum provides guidance on significant issues related to completion of corrective action activities at RCRA facilities and discusses completion determinations for less than an entire facility.

The 2002 RFCA Annual Review Report stated that EPA issued a final rule on October 3, 2001 at 66 FR 50332 entitled, *Correction to the Hazardous Waste Identification Rule; Revisions to the Mixture and Derived-from Rules; Direct Final Rule*. The Colorado Hazardous Waste Commission adopted the rule on June 17, 2003; it will be effective on August 30, 2003.

2.3 Toxic Substances Control Act

No new rules, regulations, written policies or guidance were identified within the review period.

2.4 Clean Water Act, Colorado Water Quality Control Act, and Safe Drinking Water Act

There were several actions taken under authority of the Clean Water Act in the period July 1, 2002 through June 30, 2003, some of which impact RFETS, either immediately or in the long term. However, based upon a review of the following rulemaking actions, no amendment of RFCA is proposed.

2.4.1 Clean Water Act

Definition of Waters of the United States

As a result of the *Solid Waste Agency of Northern Cook County v. U.S. Army Corps of Engineers*, 531 U.S. 159 (2001) (*SWANCC*) decision, EPA and the Army Corps of Engineers published an Advanced Notice of Proposed Rulemaking seeking comment on how to change the definition of waters of the United States to comply with the court ruling. EPA reported that the agency had received over 150,000 written comments on the proposed rule. There was no final agency action by June 30, 2003. Changes in the definition of waters of the U.S. may have an impact on certain

areas at RFETS, but any substantive regulatory change will not likely be effective before plant closure.

Phase II Storm Water Regulations

In March 2003, Phase II storm water regulations became effective, requiring small municipalities to obtain storm water permits. The new regulations also reduced the size of construction sites subject to storm water permit requirements from 5 acres to 1 acre. Since the Site already has a Phase I storm water permit, the new regulations have no immediate impact.

2.4.2 Colorado Water Quality Control Act

Site Specific Water Quality Standards

In November 2002, the Water Quality Control Commission initiated the triennial review process for the South Platte basin. While the actual triennial review is scheduled for July 2004, the Commission process now includes plenary hearings in the two years preceding the rulemaking hearing. Issues identified in the first step in this process included the appropriate averaging period for radionuclide monitoring. The Commission was requested by CDPHE to adopt an annual averaging period for plutonium and americium at the Points of Compliance at the outfalls of Ponds A-4, B-5 and C-2 using the Site's moving average methodology, as provided in Section 2.2.C.4 of RFCA Attachment 5. The second scoping hearing is scheduled for October 2003.

Colorado Water Quality Control Act Section 309

During the 2001-2002 Colorado legislative session, Section 309 was added to the Colorado Water Quality Control Act. In addition to authorizing permit fee increases, Section 309 also required the Department of Public Health and Environment to conduct a broad review of the water quality control program, including the appropriateness of water quality standards and to consider the unique characteristics of Colorado waters. A report is due to the state legislature at the end of 2003. In the past year, the Water Quality Control Division has convened monthly meetings to gather input from stakeholders on all aspects of the water quality program. One significant area of interest is effluent dominated streams, such as occurs on RFETS. The work group is considering expanding use classifications to recognize the unique characteristics of such streams.

2.4.3 Safe Drinking Water Act

No new or revised Maximum Contaminant Levels were adopted since the last update or any other changes to the Safe Drinking Water Act that would apply to RFETS activities.

2.5 Clean Air Act

EPA and the State of Colorado continued to promulgate regulations under the existing Act, but the majority is not applicable to RFETS activities. Where new regulations were applicable there were no new compliance requirements.

Colorado Air Quality Control Commission (CAQCC) Regulation No. 3

The CAQCC revised the "Air Contaminant Emissions Notices" regulations on July 18, 2002. The provisions concerning nonroad engines have changed substantially. The prior regulation exempted certain nonroad engines from Air Pollutant Emission Notice (APEN) and permitting requirements (fuel-fired generators, pumps, and compressors). To reconcile air quality concerns with these nonroad engines, the State has created a new state-only nonroad engine program for certain nonroad engines. An APEN must be filed for a nonroad engine if a trigger level will be exceeded (based on hours of operation). While these changes are significant, RFETS already has a program in place to identify and track these engines.

Coordinated provisions were made to the Common Provisions in July 2002, and to Regulation No. 3 in July and October 2002, and in March 2003. The comprehensive revisions removed duplicate definitions and moved definitions to the more appropriate of the two regulations. Many definitions and exemptions from Air Pollutant Emission Notices (APENs) and/or permits were revised. Obsolete provisions were removed from both regulations. Format, style, and language changes were made to address ambiguities. Provisions governing nonroad engines (which are important to RFETS) were revised fairly significantly. Recordkeeping requirements were added to a number of types of APEN exemptions. While these changes will not impact RFCA, it is important that the Site use the updated version of the regulations when determining applicable requirements for projects and activities.

Redesignation for PM₁₀

In September 2002, the Denver area was redesignated to maintenance for PM₁₀. Because of this, the major source permit requirements in the Denver area reverted to the prevention of significant deterioration program, rather than the nonattainment program. Because of this change, the Site is no longer a major source with respect to preconstruction permit requirements, but remains a major source under the operating permits program.

CAQCC Regulation No. 8 Part A, Subpart H (40 CFR 61, Subpart H)

EPA revised the radionuclide National Emissions Standards for Hazardous Air Pollutants in September 2002. These revisions were incorporated into the State regulations. The regulation

adopted the revised ANSI standard for monitoring equipment (shrouded probe). The Site is contending, and the State and EPA have verbally agreed, that this requirement does not apply to existing RFETS monitors due to the environmental monitoring agreement with the State and EPA, "Proposal to Use Environmental Sampling for Demonstrating Compliance with 40 CFR 61, Subpart H", dated July 1997, and the 1998 Addendum. However, any new effluent monitoring will have to meet the new standard. In addition, the revisions added an inspection and maintenance program for effluent monitors.

EPA revised the "Control of Hazardous Air Pollutants" regulations on September 9, 2002 at 67 FR 57159. The revisions incorporated ANSI 13.1-1999 by reference, making shrouded-probe sampling systems mandatory for significant new or modified effluent release points. The revisions also add new Inspection and Maintenance requirements for all sampling systems (new and existing). The revisions are anticipated to have minimal impact on the Site, if adopted by the State of Colorado. RFETS has already upgraded existing sampling systems to include shrouded probes and has agreed to install shrouded probe systems in any new significant source of radionuclide emissions. DOE is reviewing with CDPHE whether the new Inspection and Maintenance requirements will apply to existing effluent sampling systems at RFETS since these systems are no longer used to demonstrate compliance with the radionuclide National Emission Standards for Hazardous Air Pollutants standard. This could have an impact on the Integrated Monitoring Plan, which implements RFCA compliance for all monitoring systems.

CAQCC Regulation No. 8 Part B (Asbestos)

Regulation No. 8 Part B, was revised in March 2003. The regulation was reorganized. Certain definitions were changed and a requirement for air monitoring specialists to be certified was added. Some of these changes will apply to asbestos abatement activities at RFETS.

2.6 National Environmental Policy Act

No new rules, regulations, written policies or guidance were identified within the review period. No separate National Environmental Policy Act reviews have been required or performed under RFCA pursuant to RFCA paragraph 95.

2.7 Endangered Species Act

On July 17, 2002, the Department of Interior Fish and Wildlife Service issued a proposed rule (67 FR 47154) that would designate critical habitat for the Preble's Meadow Jumping Mouse, including the three major drainages at RFETS, pursuant to the Endangered Species Act of 1973, as amended. On June 23, 2003, the Department of Interior Fish and Wildlife Service issued a final rule (68 FR 37276) that excluded RFETS from designation as a critical habitat.

2.8 Migratory Bird Treaty Act

On April 15, 2003, the Department of Interior Fish and Wildlife Service issued a memorandum (MBPM-2) clarifying the application of the Migratory Bird Treaty Act to migratory bird nest destruction. The memorandum states that a permit is not required for the destruction of inactive nests that do not involve taking possession of the nest. Currently, the Site holds a Migratory Bird Treaty Act permit that includes annually reporting on the number of inactive nests removed. The Site does not plan on renewing the permit in calendar year 2004 based on this memorandum.

2.9 Radiation Related Document Review

See, Section 3.0 Radionuclide Soil Action Levels, below.

2.10 Environmental Statute Summary

Based on the review of the environmental statutes and associated regulations, written policy, and guidance, no amendment to RFCA is required at this time.

3.0 RADIONUCLIDE SOIL ACTION LEVELS

The RFCA Parties completed their review of the RSALs and the RSAL working group documented the review in, *Results of the Interagency Review of Radionuclide Soil Action Levels*, September 30, 2002, which is online at www.rfets.gov.

The RFCA Parties completed their review of the RSALs during the review period and proposed that RFCA Attachment 5, *Action Levels and Standards Framework for Surface Water, Ground Water, and Soils*, be modified to reflect the new RSALs. The RFCA Parties identified additional changes to RFCA Attachment 5, as well as RFCA Attachment 10, *RCRA Closure for Interim Status Units*. On November 12, 2002, the RFCA Parties released proposed modifications to RFCA Attachments and a new Attachment for public review and comment. The November 12, 2002 release consisted of a *Technical Basis Document for the Proposed Modifications* and the following Public Review Draft versions of the proposed modifications:

- RFCA Attachment 5, Action Levels and Standards Framework for Surface Water, Ground Water, and Soils;
- RFCA Attachment 10, RCRA Closure for Interim Status Units; and
- A new RFCA Attachment 14, Original Process Waste Lines (OPWL) Subsurface Soil Approach.

During the public comment period, on December 17, 2002, the RFCA Parties held a public meeting to discuss the proposed modifications and to accept public comments provided at that meeting. Ninety-five sets of individual or organization comments were received. After consideration of the public comments received and incorporation of changes deemed necessary for approval, EPA and CDPHE approved the final modifications on June 5, 2003.

In addition to the annual review requirements prescribed in RFCA paragraph 5, the RFCA Parties also addressed the four questions discussed in the introduction. The RSAL working group reviewed questions 1 and 2 as part of its review.

Regarding question 3, the following accelerated actions applied the interim RSALs, 50 pCi/g (the interim RSALs out for public comments) during the review period:

Building 663 cleanup levels were based on the then proposed plutonium action level of 50 pCi/g. Subsurface contamination was found at one location directly beneath a crack in the slab that apparently allowed contaminated liquids to flow into the subsurface soils. Soil contamination was removed from an area 2 feet wide, 8 feet long and 4.5 feet deep. The width of the excavation was a result of the size of the excavator bucket; the actual contaminated area was much narrower. When the excavation was complete, the plutonium activity at the bottom of the excavation was 17 pCi/g. The consultative process was used to determine when the remedial action was completed.

The 903 Pad project uses the final RFCA action levels for plutonium (50 pCi/g). Excavation depth per cell depends on the plutonium activity at each cell. As described in the ER RSOP Notification for this project, after removal of the first foot of native soils, a samples are collected. Based on these results and the depth of excavation, a decision is made on whether the excavation is complete or if more soil will be excavated. As of July 16, 2003 the maximum depth excavated was 8 feet deep below the asphalt at one 4 foot by 4 foot excavation. The size and depth of the area was negotiated with the regulators and documented on a contact record.

1. Solar Ponds project cleaned up a few small hot spots contaminated with americium 241 only. The cleanup level for americium decided upon with the regulators was 35 pCi/g. Chromium present with the americium was also cleaned up to below Tier II levels, however, the cleanup was driven by the americium. Depth was generally 6 inches to one foot, but one hot spot was remediated to a depth of between two to three feet.

Finally, regarding question 4, the first CERCLA 5 Year Review for the Site was conducted during the previous review period. On September 26, 2002 EPA concurred with the conclusions and recommendations presented in the 5 Year Review. The Review concluded that the remedies implemented for OU-1 and OU-3 are protective and that ongoing custody and control of the Site

by DOE, monitoring programs and restrictions of public access to the Site serve to adequately control risks posed by contamination, including radionuclides, at this time.

4.0 RFCA ATTACHMENT 5: ACTION LEVELS AND STANDARDS FRAMEWORK FOR SURFACE WATER, GROUND WATER AND SOILS

The RFCA Parties identified changes to RFCA Attachment 5 in addition to the proposed RSALs. Proposed modifications to Attachment 5 were available for public comment in accordance with RFCA paragraph 117 from November 12, 2002 through January 31, 2003. A public meeting was held on December 17, 2002. EPA and CDPHE approved the final modifications on June 5, 2003. See Section 3.0 above details.

Practical Quantification Limits (PQLs)

The Site's Analytical Services Division has evaluated the changes to the RFCA Attachment 5, Table 1 Surface Water Action Levels and Standards for commercial analytical capability and have determined that several of the changes are either technically not feasible, will force laboratories to use multiple methods for a single analytical suite, or employ special concentration steps. These options are not cost effective for the laboratories and may result in the Laboratory's refusal to accept RFETS samples. The Site's Analytical Services Division identified and proposed changes to some of the PQLs listed in RFCA Attachment 5, Table 1. Proposed PQLs are in Appendix 1 to this Report. If the RFCA Parties determine that changes to the PQLs are necessary, then the proposed PQLs will be available for public review and comment in accordance with RFCA paragraph 117.

5.0 PRELIMINARY REMEDIATION GOALS

The RFCA Parties updated the risk-based PRGs (formerly known as Preliminary Programmatic Remediation Goals or PPRGs) in 2002, including a new receptor, the wildlife refuge worker. The new receptor was deemed appropriate based upon the Rocky Flats National Wildlife Refuge Act of 2001, designating RFETS as a future National Wildlife Refuge. The exposure pathways; methodology, equations, and assumptions; and chemical toxicity information for both human and ecological receptors can be found in RFCA Appendix 3 IGD, Appendix N, Preliminary Remediation Goals.

6.0 IMPLEMENTATION GUIDANCE DOCUMENT

RFCA Appendix 3, IGD was reviewed by the RFCA Parties to determine if an update was necessary. Appendix K, Master List of Potential ARARs, had one comment updated to reflect a change identified for 40 CFR 761.62 during the 2002 Annual Review. Appendix M, Action

Levels for Radionuclides in Soils was deleted. Information on Action Levels for Radionuclides in Soils can now be found in *Results of the Interagency Review of Radionuclide Soil Action Levels*, September 30, 2002, which is online at www.rfets.gov. Appendix N, Preliminary Remediation Goals, was updated to include the wildlife refuge worker exposure scenario and the latest chemical toxicity information. Copies of the updated Appendices to the IGD are included as Appendix 2 to this Report.

APPENDIX 2

UPDATES TO RFCA APPENDIX 3, IGD, APPENDICES K, M AND N

Requirement	Citation	Type	Comment
ATOMIC ENERGY ACT (AEA) [42 USC 2200 et. seq.] CHRONIC BERYLLIUM DISEASE PREVENTION PROGRAM <ul style="list-style-type: none"> • Definitions • Release criteria • Waste disposal • Warning labels 	10 CFR 850 .3 .31 .32 .38 (b-c)	A	Establishes a program to reduce the number of worker currently exposed to beryllium in the course of their work at DOE facilities. The cited sections are followed in relation to determinations of beryllium contamination and release to the public.

RADIATION CONTROL			
Emergency Plan - required if material quantity exceeds Schedule E of Part 3 (e.g., 2 curies of alpha emitters) and evaluation shows maximum dose to offsite person from release exceeds 1 rem (5 rem to thyroid).	RH 3.9.1.1	A/L	DOE maintains its Emergency Plan in accordance with DOE Order 151.1, "Comprehensive Emergency Management System"
Decommissioning Plan Contents - must include a description of methods used to ensure protection of workers and the environment against radiation hazards during decommissioning.	RH 3.16.4.3.3	A	Planned implementation of Site approved procedures to meet 10 CFR 835, "Occupational Radiation Protection" and the Site's IWCP process will be described for proposed actions.
Decommissioning Plan Contents - must include a description of the planned final radiation survey.	RH 3.16.4.3.4	A/L	Planned implementation of the Decommissioning Characterization Protocols or any final sampling and analysis plan for environmental media will be described.
Decommissioning Plan Contents - must include a description of the intended final condition of the site, buildings and/or outdoor areas upon decommissioning.	RH 3.16.4.3.6	A/L

RADIATION CONTROL			
Radiation Protection Program - To extent practicable, procedures and controls used shall be based on sound radiation protection principles to achieve public doses that are ALARA.	RH 4.5.2	A	Planned implementation of Site approved procedures to meet 10 CFR 835, "Occupational Radiation Protection", DOE Order 5400.5, "Radiation Protection of the Public and the Environment" and the Site's TWCP process, which includes Lead Regulatory Agency involvement, will be described for proposed actions.
Radiation Protection Program - Imposes constraint on air emissions of radioactive material to the environment. "Individual member of the public likely to receive the highest dose" will not be expected to receive a TEDE greater than 10 mrem/yr from air emissions. Requires exceedance reporting and corrective action to ensure against recurrence.	RH 4.5.4	A	Listed only for completeness of this table. NESHAPS already identified as ARAR. Radionuclide NESHAPS required monitoring established at site perimeter is used to determine potential for exposure to individual member of the public.
Dose limits for individual members of the public - TEDE from licensed operations less than 100 mrem/yr above background, exclusive of medical exposure and exposure from disposal by sanitary sewer. Dose rate in unrestricted areas less than 2 mrem/hr.	RH 4.14.1	A/L	Site approved procedures to meet DOE Order 5400.5, "Radiation Protection of the Public and the Environment" are based on the same dose rate limits.

Requirement	Citation	Type	Comment
<p>RADIATION CONTROL</p> <p>Dose Limits for Individual Members of Public - Surveys of radiation levels in unrestricted areas and radioactive materials in effluents released to unrestricted areas shall be made to demonstrate compliance with the dose limits for individual members of the public in RH 4.14.</p>	RH 4.15.1	A/L	<p>Surveys are conducted pursuant to site approved procedures to meet DOE Order 5400.5, "Radiation Protection of the Public and the Environment". Radionuclide NESHAPS required monitoring established at site perimeter is used to determine potential for exposure to individual member of the public. Surface water is monitored in accordance with the Integrated Monitoring Plan and RFCA Attachment 5.</p>
<p>Dose Limits for Individual Members of Public - Provides the means to demonstrate compliance with RH 4.14: by measurement or calculation that dose does not exceed the annual limit or by demonstrating that annual average radioactive material concentration released in gaseous and liquid effluents at boundary of the unrestricted area does not exceed Appendix B, Table II, "Effluent Concentrations".</p>	RH 4.15.2.1 and .2	L	<p>Site approved procedures to meet DOE Order 5400.5, "Radiation Protection of the Public and the Environment" are based on the same dose rate limits. RADIATION CONTROL			
Surveys shall be made as necessary to evaluate radiation levels, concentrations of radioactive material and potential radiological hazards that could be present.	RH 4.17.1	A/L	Planned implementation of Site approved procedures to meet 10 CFR 835, "Occupational Radiation Protection", DOE Order 5400.5, "Radiation Protection of the Public and the Environment" and the Site's IWCP process, which includes Lead Regulatory Agency involvement, will be described for proposed actions. Requirements for radiation surveys are met through the Reconnaissance Level Characterization Survey Plans and Predemolition Survey Plans for facility decommissioning and through Sampling and Analysis Plans and the Integrated Monitoring Plan for Environmental Restoration.
Instruments and equipment used for qualitative radiation measurements must be calibrated at intervals NTE 12 months, unless otherwise noted by regulation.	RH 4.17.2	A	

A - Action-Specific ARAR; C - Chemical-Specific ARAR; L - Location-Specific ARAR; TBC - To Be Considered

Requirement	Citation	Type	Comment
<p>RADIATION CONTROL</p> <p>Waste Disposal - Shall dispose only by transfer to authorized recipient, by release in effluents within the limits of subpart RH 4.14 (discussed above), or as authorized pursuant to (pertinent to RFETS) RH 4.34, "Method for Obtaining Approval of Proposed Disposal Procedures", or RH 4.35, "Disposal by Release into Sanitary Sewerage".</p>	RH 4.33	A/L	<p>Transfer to authorized recipient is met through compliance with the "offsite rule", 40 CFR 300.440. Proposals for onsite disposal of radioactive waste (if any) will be part of any accelerated action, or any final action regulatory decision document for environmental media cleanup projects proposing specific disposal methods. RH Part 11, "Special Land Ownership Requirements" which addresses requirements if government ownership of RFETS is transferred to private ownership, and RH Part 14, "Licensing Requirements for Land Disposal of Low Level Radioactive Waste" will be reviewed for relevant and appropriate requirements for cleanup projects proposing specific disposal methods.</p>
<p>Disposal by Release to Sanitary Sewer - Material must be "readily soluble" in water, monthly average concentrations below Appendix B, Table III, "Concentrations for Release to sanitary Sewerage". Total less than 1 curie/year.</p>	RH 4.35	A	<p>Site approved procedures to meet DOE Order 5400.5, "Radiation Protection of the Public and the Environment" are based on the same concentration limits. Required radionuclide monitoring for the discharge of the RFETS Sewage treatment Plant is established in the Rocky Flats NPDES Permit. Surface water is also monitored in accordance with the Integrated Monitoring Plan and RFCA Attachment 5.</p>

Requirement	Citation	Type	Comment
<p>RADIATION CONTROL Permissible levels of plutonium in uncontrolled areas - Soil concentration greater than 2 DPM per gram or per cm² presents sufficient hazard to the public health that requires use of special construction techniques.</p>	RH 4.60	A/L	<p>All of RFETS is a controlled area as defined in 10 CFR 20.1003 ("controlled area", outside of a restricted area but inside the site boundary, access to which can be limited by the licensee for any reason) and RH 1.4 ("uncontrolled area" means area, access to which is neither limited nor controlled by the licensee). These terms are also consistent with 10 CFR 835.2. DOE does not anticipate any construction in uncontrolled areas to decommission RFETS.</p>
<p>Radiological Criteria for License Termination (i.e., for Decommissioning) - Must calculate maximum TEDE to "average member of the critical group" within the first 1000 years after decommissioning.</p> <p>NOTE: Decommissioning criteria in section RH 4.61 do not apply to waste disposal cells.</p>	RH 4.61.1.2	A/L	<p>Although license termination is not relevant to Rocky Flats, CDPHE believes the substantive criteria in this regulation are relevant and appropriate standards for decommissioning Rocky Flats. See the RSAL Regulatory Analysis for the RFCA Parties understandings regarding implementation of the "Decommissioning Rule".</p>
<p>Radiological Criteria (for Decommissioning) - Determination of dose and residual activity levels which are ALARA, must take into account consideration of any detriments expected to potentially result from decontamination and waste disposal.</p>	RH 4.61.1.3	A/L	<p>The analysis will be part of any accelerated action for environmental media cleanup projects and any final action regulatory decision document.</p>

Requirement	Citation	Type	Comment
RADIATION CONTROL			
Criteria for Unrestricted Use - Residual radioactivity above background has been reduced to levels that are ALARA and results in TEDE to average member of the critical group that does not exceed 25 mrem/yr., including groundwater sources of drinking water.	RH 4.61.2	A/L	The analysis will be part of any accelerated action for environmental media cleanup projects and any final action regulatory decision document.
Criteria for Restricted Use - Must demonstrate that further residual radioactivity reductions to meet Unrestricted Use: 1) would result in net public or environmental harm OR 2) are not being made because residual levels are ALARA.	RH 4.61.3.1	A/L	
Criteria for Restricted Use - 1) Provisions made for durable, legally enforceable institutional controls that provide reasonable assurance that TEDE to average member of the critical group will not exceed 25 mrem/yr. AND 2) If Institutional Controls were no longer in effect, TEDE above background is ALARA and would not exceed either: 100 mrem/yr. OR 500 mrem/yr., if demonstrated that further reductions are not technically achievable, would be prohibitively expensive or would result in net public or environmental harm.	RH 4.61.3.2 and .3	A/L	

Requirement	Citation	Type	Comment
<p>RADIATION CONTROL Alternate (Decommissioning) Criteria -</p> <ol style="list-style-type: none"> 1) Analysis provides assurance that public health and safety would continue to be protected and unlikely TEDE would be more than 100 mrem/yr. 2) Employment of restrictions on site use that minimize exposures at the site. 3) Doses are reduced to ALARA. 	<p>RH 4.61.4.i.1 through .3</p>	<p>A/L</p>	
<p>CLEAN AIR ACT (CAA) [42 USC 7401 et. seq.] NATIONAL AMBIENT AIR QUALITY STANDARDS (ic V2 "AMBIENT AIR QUALITY STANDARDS)</p> <ul style="list-style-type: none"> • Sulfur Dioxide • Particulate Matter (PM10 & PM2.5) • Carbon Monoxide • Ozone • Nitrogen Dioxide • Lead 	<p>5 CCR 1001-14 [40 CFR 50]</p>	<p>C</p>	<p>National Ambient Air Quality Standards (NAAQS) define levels of air quality which are deemed necessary, with an adequate margin of safety, to protect the public health. The standards are the basis for air quality regulations that are designed to improve and protect air quality. The Denver metro area exceeds the standard for particulate matter and carbon monoxide (i.e. non-attainment for those pollutants).</p> <p>Ambient air quality standards are not effluent discharge limitations; they are used in conjunction with air dispersion modeling to establish emission limits that are protective of air quality. Air Quality Management personnel will review projects for Prevention of Significant Deterioration and Non-attainment Area permitting requirements, and perform modeling, if requested by CDPHE, to demonstrate compliance with the NAAQS.</p>

<p>FEDERAL WATER POLLUTION CONTROL ACT [33 USC 1251 et. seq.]</p> <p>WATER QUALITY CRITERIA – GOLD BOOK{tc V 2 “QUALITY CRITERIA – GOLD BOOK”}</p>	<p>33 USC 1314 (CWA Section 304)</p>	<p>C</p>	<p>The “Gold Book” presents guidelines with respect to water quality criteria for toxic pollutants. Criteria are published for aquatic and human health. The water quality criteria are not promulgated standards; however, they are established guidelines used for developing NPDES permits and may be considered potentially relevant and appropriate. WQC should not be used as effluent limits, rather discharge limits should be established either through the NPDES or UIC permitting process.</p> <p>Although water criteria are non-promulgated and non-enforceable standards, Section 121(d)(2)(B)(i) of CERCLA as implemented by the NCP (40 CFR 300.430(e)(2)(D)(B)) specifies that WQC established under Sections 303 and 304 of the CWA shall be attained where relevant and appropriate under the circumstances of the release. The designated or potential use of the surface or groundwater, the environmental media affected, the purpose for which the WQC were developed, and the latest information are to be considered in determining the relevance and appropriateness of the WQC to the response action. Therefore, the need to comply with WQC as a relevant and appropriate requirement needs to be determined on a case-by-case basis using the factors listed above.</p>

<p>SOLID WASTE DISPOSAL ACT (aka: Resource Conservation and Recovery Act) [42 USC § 6901 et. seq.] SUBTITLE C: HAZARDOUS WASTE MANAGEMENT [Colorado Hazardous Waste Act (CRS § § 25-15-101 to -217)]</p> <p>The State of Colorado is authorized to administer portions of the hazardous waste management program (e.g., RCRA) to regulate the generation, treatment, storage, and disposal of hazardous waste within Colorado. As such, the Colorado regulations that are more stringent than the federal counterparts would be applicable to the management of hazardous waste. These regulations may also be relevant and appropriate in situations where a remediation waste is "sufficiently similar" to a RCRA-listed waste (e.g., waste which was generated and disposed of prior to the effective date of regulation) or when the proposed remedial action is similar to a RCRA-regulated activity and would be appropriate to ensure that the activity is protective of human health and the environment. Although the Colorado hazardous waste management regulations are similar to the federal requirements, both the federal and state regulatory citations are provided for reference purposes and to denote that both federal and state requirements were considered in establishing the ARAR requirement adopted for the remediation of the RFEITS. Only substantive portions of the regulations are required under CERCLA actions for onsite activities. The State has not verified that these are the only substantive standards. The final determination is predicated upon an analysis for a specific action.</p>	<p>6 CGR 1007-2 Section 1.2</p>	<p>A</p>	<p>"Recyclable materials" means any type of discarded or waste material that is not regulated under Section 25-8-205(1)(c), C.R.S., and can be reused, remanufactured, reclaimed, or recycled</p>

Appendix M

ACTION LEVELS FOR RADIONUCLIDES IN SOILS

This IGD Appendix originally contained the technical basis for the development of the enforceable action levels for radionuclides in soil as defined in Attachment 5 to the Rocky Flats Cleanup Agreement. This Appendix has been superceded. For the latest technical basis for the development of radionuclide soil action levels see *Results of the Interagency Review of Radionuclide Soil Action Levels*, September 20, 2002, which is online at www.rfets.gov.

1.0 INTRODUCTION

DOE first developed human health risk-based Preliminary Remediation Goals (PRGs) in 1995 to establish initial site-wide cleanup targets for contaminants for each environmental medium. The PRGs have been updated regularly to conform with the evolving site conceptual model and future land use. The latest update is based on the work of the Radionuclide Soil Action Level Workgroup ([RSALW], Task 3 Report and Appendices: Calculation of Surface Radionuclide Soil Action Levels for Plutonium, Americium, and Uranium, September 30, 2002). The human health PRGs are currently used in RFCA Attachment 5 as action levels for the following mediums:

- **Groundwater Action Levels:** Human health PRGs based on the residential groundwater ingestion scenario are used where no Maximum Contaminant Level (MCL) is available from EPA; and
- **Soil Action Levels:** For non-radionuclides, human health PRGs based on the wildlife refuge worker scenario are used where no applicable or relevant and appropriate requirement is available.

DOE, EPA, and CDPHE, with support from the U.S. Fish and Wildlife Service, developed ecological PRGs in 2002. Ecological receptor PRGs were only calculated for analytes originally identified by the 2002 Ecological Risk Working Group as being of site-wide potential concern to ecological receptors. The ecological receptor PRGs are currently used in RFCA Attachment 5 as action levels for soil.

Human health and ecological PRGs are reviewed and updated, as necessary, on an annual basis.

2.0 HUMAN HEALTH

2.1 Exposure Pathways

In order to standardize the risk-based PRGs across RFETS, programmatic exposure pathways and receptors were established. The following tables identify the receptors and exposure pathways selected for each environmental medium:

- Table 1: Wildlife Refuge Worker Exposure Scenario
- Table 2: Rural Resident Groundwater Exposure Scenario(wc1)

Standard calculation methods given in Risk Assessment Guidance for Superfund (RAGS), part B (USEPA, 1991) were used in developing risk-based PRG pathways where available. Most of the exposure factors for the PRGs were developed and agreed upon by the RSALW and are presented and documented in the Task 3 Report (September 30, 2002).

2.2 Methodology, Equations, and Assumptions

Risk-based PRGs were developed for the Target Analyte List of metals and organics for the wildlife refuge worker exposure scenario; and the residential groundwater exposure scenario. Separate risk-based equations were developed to account for the carcinogenic and/or noncarcinogenic effects of the contaminant. Risk-based PRGs for carcinogens were calculated by setting the carcinogenic target risk level at $1E-05$ and $1E-06$. A target risk level of 10^{-5} means that an individual has a ten-in-one million probability of developing excess cancer over a lifetime as a result of exposure to a specific contaminant; a target risk level of 10^{-6} means that an individual has a one-in-one million probability of developing excess cancer over a lifetime as a result of exposure to a specific contaminant. This risk is in addition to the probability of an individual developing cancer from some other factors including environmental pollution not related to the site, heredity, or lifestyle.

Similarly, risk-based PRGs for toxicants (noncarcinogens) were calculated by setting the hazard quotient equal to 1 and 0.1 for each contaminant. A hazard quotient is the ratio of a single substance exposure level of a chemical contaminant over a specified period to the reference dose for the chemical. The reference dose represents an estimate of an exposure level for the human population, including sensitive subpopulations, that is likely to be without appreciable deleterious effects during a lifetime. When both carcinogenic and noncarcinogenic toxicity information was available both carcinogenic and noncarcinogenic risk-based concentrations were calculated and the more restrictive value was selected as the risk-based PRG.

The risk-based PRG exposure scenarios and equations provided in Tables 1 and 2 include all of the exposure pathways identified for the exposure scenario; separate risk-based PRGs were not calculated for each exposure pathway.

2.3 Chemical Toxicity Information

The chemical-specific toxicity values used for the calculation of the risk-based PRGs are presented in Table 3. Toxicity information used to calculate the PRGs included the carcinogenic slope factor or unit risk, and for noncarcinogenic effects, the reference dose (RfD) and reference concentration (RfC). Toxicity values were obtained from the latest information in EPA's Integrated Risk Information System (IRIS) files, the EPA Health Effects Assessment Summary Tables (HEAST), and the EPA, Region 3, PRG tables. Values for polycyclic aromatic hydrocarbons were calculated using EPA's Provisional Guidance for Quantitative Risk Assessment of Polycyclic Aromatic Hydrocarbons.

3.0 ECOLOGICAL RECEPTORS

3.1 Exposure Pathways and Receptors

The RFETS environment as it relates to ecological risk assessment is described in detail in *Final Ecological Risk Assessment Methodology: Sitewide Conceptual Model* (DOE 1996a). Primary exposure pathways for mammalian and avian receptors to site contaminants of

concern (COCs) are ingestion of COCs in food, ingestion of soils, and external exposure to penetrating radiation present in soils (Table 4). Secondary pathways include dermal contact, particulate inhalation, and inhalation of volatile organic released into burrows. Inhalation and dermal contact are considered minor compared to the ingestion and external exposure pathways.

The following receptors were evaluated as representative of site ecological groups to quantify PRGs:

- Fossorial (burrowing) small mammal (Prairie Dog)
- Fossorial (burrowing) small mammal (Preble's Meadow Jumping Mouse)
- Herbivorous small mammal (Deer Mouse)
- Insectivorous small mammal (Deer Mouse)
- Small ground-feeding birds (Mourning Dove)
- Avian Predator (American Kestrel)

The general exposure scenario assumed for all receptors included direct ingestion of soil, incidental ingestion of soil during feeding and burrowing, and ingestion of prey items. PRGs were also developed for external exposure to radionuclides, but these resulting soil concentrations were much higher than ingestion based PRGs. Radionuclide PRGs were based on the methodology developed by Higley and Kuperman (1995) for RFETS.

3.2 Methodology, Equations, and Assumptions

Risk-based PRGs were developed for a list of COCs identified by the ecological risk assessment working group. EPA's Eco Soil Screening Levels (EcoSSLs) process was used as a general guidance to develop the PRGs (EPA 2000). Extensive use was made of existing databases and compilations of ecotoxicity information, especially those from other DOE facilities such as Oak Ridge National Laboratories and Los Alamos National Laboratories.

The EcoSSL document provides general equations and procedures for developing PRGs from toxicological research, receptor-specific exposure parameters such as food ingestion rates, diet, and bioaccumulation factors (BAFs) that describe uptake of COCs from soils into forage or prey species (Table 5). Intake from multiple sources of incidental soil intake such as plant ingestion, prey ingestion etc. are summed to estimate the total intake from this exposure pathway. The general equation to calculate PRGs is also presented in Table 5.

Risk-based PRGs were then calculated by applying a target hazard quotient (HQ) equal to 1.0 for each COC and receptor. PRGs corresponding to both the No Observed Adverse Effects Levels (NOAEL) and Lowest Observed Adverse Effects Levels (LOAEL) were calculated. However, only the LOAEL concentrations are used for the RFCA PRGs with the exception of those areas deemed to be potential Preble's Meadow Jumping Mouse (PMJM) habitat.

Given the special status of this species, the ecological risk assessment working group determined that the NOAEL TRV would be used for the PMJM receptor in the areas in which the receptor may reside. [JMA2] Calculated PRGs represent soil concentrations below which no risk to wildlife populations would be predicted following exposure of specific ecological receptor species to contaminants present in soils and food.

3.3 Chemical Toxicity Information

Chemical-specific Toxicity Reference Values (TRVs) are presented in Table 6. TRVs were compiled for mammalian and avian species from pre-existing data reviews, guidance documents, and peer reviewed literature sources. Rodent studies were preferred for mammalian data, since the two surrogate wildlife mammalian species are rodents. Bird studies were used as sources of TRVs for avian receptors. No extrapolation between bird and mammalian toxicity information was used to calculate the PRGs.

Available NOAELs and LOAELs for site soil COCs were chosen based on the following criteria:

- Oral exposure studies from which a dose could be determined.
- Generally, only chronic or subchronic studies were used. However, some acute studies where reproductive and developmental endpoints were assessed during discrete, critical life stages.
- Growth and mortality endpoints.

Following initial compilation of TRVs presented, primary study papers were obtained, when possible. Database TRV values were then confirmed by review of the original study documents. It should be noted that no adjustments of the original TRVs were made for study duration. Nor was an analysis of study "quality" conducted to weight the TRVs according to EcoSSL guidance.

NOAEL and LOAEL TRVs were compiled from the database of preliminary TRVs discussed above. Average TRVs were calculated by obtaining the arithmetic mean of several groups of endpoints. Individual average TRVs were then calculated for growth, reproductive, and mortality endpoints for those COCs where available. In addition, an average TRV was calculated for each COC using a compilation of all sub-lethal endpoints available from the literature search and databases. These TRVs were then used to quantify final PRGs.

Bioaccumulation Factors (BAFs) (Table 7) were identified and calculated for use in the PRG development process. As with the TRV selection process, the procedures used in the selection of BAFs closely corresponded to those developed in the EcoSSL guidance (USEPA 2000). BAFs are either simple ratios of COC concentrations between biota and soils, or based on quantitative relationships such as linear, logarithmic, or exponential equations.

BAFs were calculated or identified for the following pathways:

- Soil to Plant
- Soil to Terrestrial Invertebrate
- Soil to Small Mammal
- Soil to Bird

BAFs were obtained from several publicly available databases, peer reviewed literature, and from approved ERAs at other sites that are applicable to the CSM and data uses for RFETS.

4.0 RFETS PRGS

Tables 8 and 9 are a summary of the human health PRGs for each exposure scenario.

Table 9 is a summary of the ecological PRGs for each receptor.

Table 1. Wildlife Refuge Worker Exposure Scenario

The Wildlife Refuge Worker Surface Soil Exposure Scenario consists of the following pathways: ingestion of surface soil, outdoor inhalation of dust (inhalation of volatiles is not assessed (WC3)), and dermal contact for nonradionuclides for a wildlife refuge worker working at the site for an average of 18.7 years, spending 50% of this time outdoors. Exposures for radionuclides are not assessed in this spreadsheet (refer to the RSALS Task 3 Report and Appendices (Sept. 2002)). The worker is assessed as spending all of their time on the most contaminated areas of the site, and performs soil-contact intensive activities. This scenario includes all complete and significant exposure pathways and parameter assumptions that were evaluated in the Task 3 Report and Appendices, as well as the dermal pathway. Calculations in this spreadsheet are performed deterministically.

Equations used for the 2002 WLRW PRG spreadsheets:

Waste Refuse Worker Surface Soil Exposure Scenario

$$\text{Noncarcinogenic PRG} = \left(\frac{(THI \times AT_{NC}) \times 365(\text{d/y})}{(SFLA_WRW(\text{mg/d}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times 10^{-6}(\text{g/mg}) \times 1/FRD_{(mg/kg)} \times 1/BW_A(\text{kg}))} + \frac{(SA_WRW(\text{cm}^3) \times AF_WRW(\text{mg/cm}^3 \text{ event}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times ABS \times EV(\text{events/d}) \times 1/FRD_{(mg/kg)} \times 10^{-6}(\text{g/mg}) \times 1/BW_A(\text{kg}))}{(SFLA_WRW(\text{mg/d}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times 1/PEF(\text{yr}^{-1}) \times 1/FRD_{(mg/kg)} \times 1/BW_A(\text{kg}))} + \frac{(ETL_WRW + (ETL_WRW \times DFB))}{(SFLA_WRW(\text{mg/d}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times 1/PEF(\text{yr}^{-1}) \times 1/FRD_{(mg/kg)} \times 1/BW_A(\text{kg}))} \right)$$

* for volatile compounds, substitute the chemical-specific volatilization factor, VF, found on the newChemStans sheet for PEF

$$\text{Carcinogenic PRG} = \left(\frac{(TR \times AT_C) \times 365(\text{d/y})}{(SFLA_WRW(\text{mg/d}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times 10^{-6}(\text{g/mg}) \times CSF_{(risk/mg/kg)} \times 1/BW_A(\text{kg}))} + \frac{(SA_WRW(\text{cm}^3) \times AF_WRW(\text{mg/cm}^3 \text{ event}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times ABS \times EV(\text{events/d}) \times CSF_{(risk/mg/kg)} \times 10^{-6}(\text{g/mg}) \times 1/BW_A(\text{kg}))}{(SFLA_WRW(\text{mg/d}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times 1/PEF(\text{yr}^{-1}) \times CSF_{(risk/mg/kg)} \times 1/BW_A(\text{kg}))} + \frac{(ETL_WRW + (ETL_WRW \times DFB))}{(SFLA_WRW(\text{mg/d}) \times EF_WRW(\text{d/y}) \times ED_WRW(\text{y}) \times 1/PEF(\text{yr}^{-1}) \times CSF_{(risk/mg/kg)} \times 1/BW_A(\text{kg}))} \right)$$

* for volatile compounds, substitute the chemical-specific volatilization factor, VF, found on the newChemStans sheet for PEF

Table 2. Rural Resident Groundwater Exposure Scenario

The Rural Residential Groundwater Exposure Scenario consists of the following pathway: ingestion of groundwater. Inhalation of volatiles is not considered. The resident ingests groundwater while living at the site for 30 years. It is assumed that the rural resident will live on a 5-acre ranchette, which would be part of a development. It is unlikely that shallow groundwater would be ingested due to limitations in ability for the shallow aquifer to supply water in sufficient quantity. This scenario is for use in the development of the groundwater Action Levels. Calculations in this spreadsheet are performed deterministically.				
Exposure Parameter	Variable	Unit	Point Estimate*	Source
General Assumptions				
Target hazard index-1	THI-1	--	0.1	EPA, 1991a
Target excess lifetime cancer risk-1	TR-1	--	1E-06	EPA, 1991a
Target hazard index-2	THI-2	--	1	
Target excess lifetime cancer risk-2	TR-2	--	1E-05	
Adult body weight	BW_A	kg	70	EPA, 1991b
Child body weight	BW_C	kg	15	EPA, 1991b
Residential Exposure Scenario Assumptions				
Averaging time - noncarcinogenic	AT_NC	yr.	30	EPA, 1991b
Averaging time - carcinogenic	AT_C	yr	70	EPA, 1991b
Exposure frequency	EF_RR	day/yr	350	EPA, 1991b
Exposure duration	ED_A	yr	30	EPA, 1991b
Daily water ingestion rate	IRw	L/day	2	EPA, 1991b
Toxicity Values				
Oral reference dose	RfDo	mg/kg-day	chemical-specific	IRIS, HEAST or NCEA
Oral cancer slope factor	CSFo	risk/(mg/kgd)	chemical-specific	IRIS, HEAST or NCEA
Inhalation reference dose	RfDi	mg/kg-day	chemical-specific	IRIS, HEAST or NCEA
Inhalation cancer slope factor	CSFi	risk/(mg/kgd)	chemical-specific	IRIS, HEAST or NCEA

(1) BCF is estimated using the log Kow value and equations from USEPA SSL Guidance (2000) modified, from Travis and Arms (1988)

(2) Mean BCF calculated in ORNL. (1998) - Empirical Models for the Uptake of Inorganic Chemicals from Soil by Plants

(3) Derived from empirical data

(4) BCF was calculated using the log Kow equations from Southworth et al. (1978)

(5) Mean BCF calculated in Sample et al. (1998) - Development and Validation of Bioaccumulation Models for Earthworms

(6) BCF from USEPA (1999) Draft Combustor Risk Assessment Guidance was used.

(7) Mean BCF calculated in Sample et al. (1998) - Development and Validation of Bioaccumulation Models for Small Mammals

(8) BCF from Charters (1991)

(9) BCF from Paine et al. (1993)

* Soil to mammal and soil to bird BCFs taken from USEPA (1999) for Soil to Deer Mouse and Soil to Mourning Dove (Table D-3)

Toluene	1	1.97E+02	3.38E+02	1.28E+03	2.15E+02	1.28E+02	NV	3.29E+02	NV	NV	3.29E+02	Prairie Dog	3.13E+04
Uranium	1	1.54E+02	2.07E+02	3.26E+02	1.64E+02	1.96E+02	2.21E+04	6.78E+01	2.85E+04	NV	6.78E+01	Prairie Dog	3.07E+03
Vanadium	1	8.42E+02	1.41E+03	3.71E+03	8.67E+02	4.45E+03	2.92E+03	4.36E+02	4.33E+02	NV	4.36E+02	Kestrel	7.15E+03
Vinyl Chloride	1	9.34E+00	2.62E+00	1.66E+00	1.01E+01	1.66E-01	NV	4.31E-01	NV	NV	4.31E-01	PMJM(3)	1.83E-01

All units are in mg/kg

- (1) Ecological PRGs less than Worker PRGs denoted with shading.
- (2) The invertebrate receptor has the lowest PRG for Aroclor 1254, however, little confidence is placed on the data used to calculate that value. Therefore, the lowest vertebrate PRG was used.
- (3) The PRG for the Preble's Meadow Jumping Mouse is the lowest PRG. If this PRG is exceeded, an evaluation of the habitat where the sample was collected should be made. If this habitat is not suspected to be suitable for the Preble's Meadow Jumping Mouse, the next lowest PRG should be used.

NV = No reliable PRG could be calculated due to a lack of toxicity information for the receptor.
